Future-proof historic centres

The local support group of Delft aims to give the eco-restoration in Delft a basis within the existing organizations of Delft. In this group different aspects of eco-restoration are represented. Together we aim to work on a local action plan in order to stimulate eco-renovation and to exchange knowledge.

ERFGOEDHUIS-ZH

Erfgoedhuis Zuid-Holland is an organization that supports local governments in their heritage management. It is also represented in the KISSZ eco-restoration network from the province of South-Holland.

The Technical University Delft is represented by the department of RMIT (restoration, modification, intervention and transformation). RMIT promotes eco-restoration in different education projects. Furthermore the faculty of architecture of the TU Delft is working on an innovative eco-renovation project of their own building.

Foundation "De Witte Roos" is spreading information on sustainable living and participating in the European project 'Living Green'. It is doing an eco-renovation of an historic listed building in order to convert this building into an eco-restoration information center.

Delfia Batavorum is the historic society of Delft. It represents a wide group of experienced volunteers and inhabitants to promote the history of Delft and the value of its cultural history.

The city of Delft participates in a few national networks to stimulate and share knowledge on eco-restoration: in a network with the university of Nyenrode and in the provincial KISSZ network. The department of built heritage works together with the department of environment in order to stimulate energy-saving measurements in existing historic buildings.
