REDIS – Restructuring Districts into Science quarters

The objective of this network is to contribute to a more effective application of knowledge, creativity and innovation in the cities and thereby to the development of a knowledge based European Economy.

REDIS focuses on the interface between scientific promotion and urban development. It raises the issue of the sustainable development and management of Science Quarters.

Participants will have the opportunity to design together with their local actors a vision of future city development and an action plan to attain this vision.

Recommendations and a handbook with guidelines and good practices will contribute to a better exploitation of the potential of knowledge and creativity.

Leadpartner:

City of Magdeburg / Team Science
Dr. Klaus Puchta
puchta@ob.magdeburg.de

Lead Expert

Dr. Willem van Winden
an expert in the field of urban and regional economic development and strategies
w.van.winden@urbaniq.nl

LEADPARTNER

Magdeburg (DE)

Project "Science Port"

Change of an old inland port in a science area

PARTNER

Manresa (ES)

Project "Central Park"

Development of a Technology Park

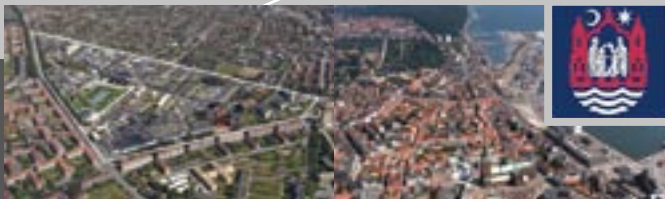

PARTNER

Aarhus (DK)

Project "Katrinebjerg"

Development of a mixed area into IT-cluster area
