the European Union
Interreg

URBACT

Co-funded by
the European Union
Interreg

URBACT is an EU-funded programme supporting sustainable urban development in Europe through:

Networks of European cities

Capacity building
activities & tools

Knowledge uptake
and sharing

Currently 525 cities involved in 65 networks

URBACT

Co-funded by
the European Union
Interreg

URBACT Knowledge hub on social data

Webinar 1
15/01/2026

**What do EU cities
really know?
Social data needs,
challenges and
turning it into policy**

Expert: Mar Santamaría

inspiration from:
Bologna (IT)
Granada (ES)
Sligo (IR)

Webinar 2
22/01/2026

**How to collect and
manage data for
social policies?**

Expert: Sofia Aivalioti

inspiration from:
Kuopio (FI)
**Pentágono Urbano
(PT)**
Lyon (FR)

Webinar 3
29/01/2026

**How to interact and
draft social policies
with data?**

Expert: Zsolt Séra

Webinar 4
19/02/2026

**How to measure
the impact of social
policies with data?**

Expert: Liat Rogel

Inspiration from:
Cinisello Balsamo (IT)
Glasgow (UK)

31 March - 01 April 2026 - Nicosia, Cyprus

Objective

A focused session to promote the use of **social data** for people-centered, evidence-based and participatory urban policies

Gather more best practices from the assistant (you)

URBACT

Co-funded by
the European Union
Interreg

- **Social data overview**
- **Guest Speakers Q&A**
 - Mar Santamaria, consultant team to the city of Bologna (IT)
 - Ángel Luís Benito (City Council of Granada) (ES)
 - Brían Flynn (Sligo County Council), Gail McGibbon and Edel Doran (Sligo BID) (IR)
- **Summary**

[The networks

Co-funded by
the European Union
Interreg

Why do we talk about data?

Efficiency

It helps us make processes more efficient. Less cost and resources.

Facility

Easy, fast, clear

No data system is meaningful unless it ultimately serves and reflects the citizen.

Citizen-centered data

It connects us with citizens, letting them share insights and ensuring data truly reflects their reality. It helps ensure transparency through accurate, reliable data.

URBACT

Co-funded by
the European Union
Interreg

Why do we talk about social data?

Social data are data generated by or about people and communities that describe social conditions, behaviors, interactions, and lived experiences, and that can be used to inform and evaluate public policies.

Why do we talk about social data?

Data about citizens

Describes living conditions, needs, behaviours, and inequalities

Contextual and place-based: linked to the local context and lived experience

Dynamic: captures social change over time

Data for citizens

Used to improve policies, services, and quality of life

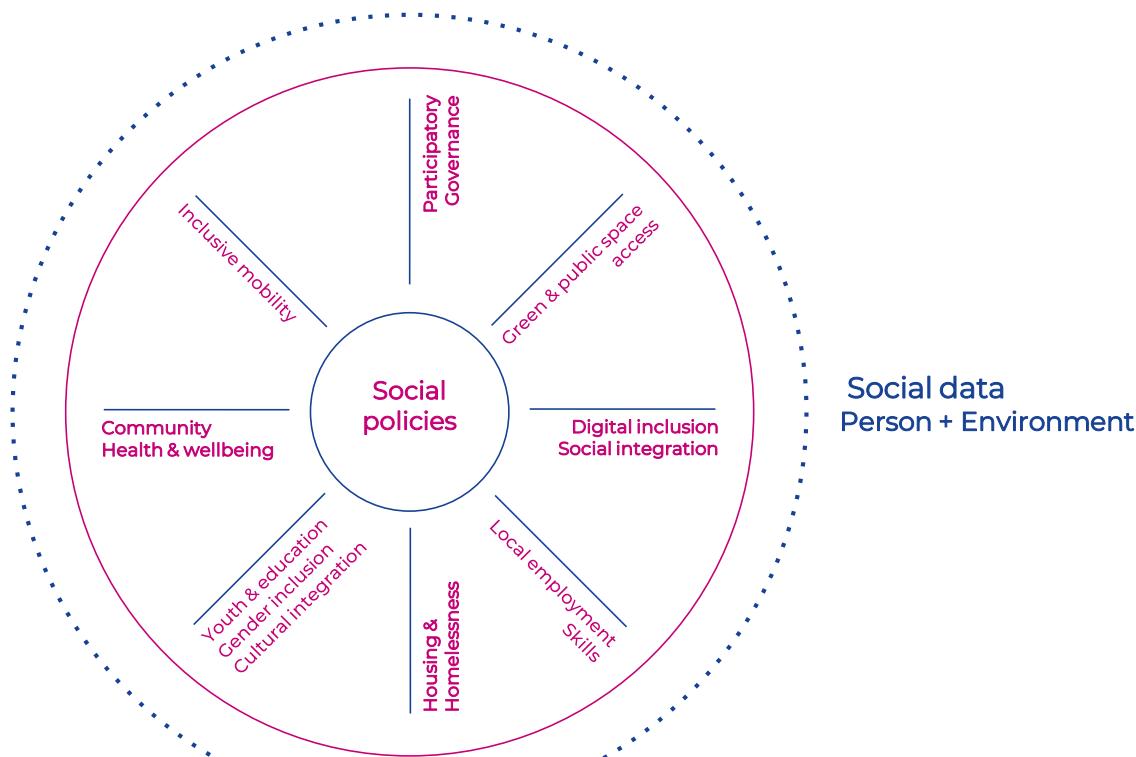

People-centred: focused on real needs, not just averages

Data with citizens

Co-produced through participation, consultation, and engagement

Builds trust, ownership, and legitimacy. Ethical: requires fairness, transparency, and privacy protection

[Social data for social policies

URBACT

Co-funded by
the European Union
Interreg

In one word, describe your city's
biggest social data challenge

What happened with data in the last 15 years?

Higher spatial resolution
Higher temporal resolution
More data sources

[The data acquisition

**What data is available
and how to produce it?**

URBACT

Co-funded by
the European Union
Interreg

What data sources do we have nowadays?

by nature (some examples):

Census

- **Population** (size and density, migration background, education level)
- **Housing conditions**
- **Cadastre**

Statistics

- **Poverty and income indicators**
- **Employment and unemployment rates**
- **Health and wellbeing indicators**
- **Quality-of-life indices**

Administrative records

- **Citizen feedback**
- **Public service use**
- Social benefits and assistance records**
- Social housing applications**
- **Building permits & licenses**

Sensor data

- **Waste**
- **Air quality**
- **Mobility patterns affecting access to services**

Satellite data

- **European Space Agency**
- **Climate vulnerability**
- **Green space availability**
- **Land use and urban density**
- **Informal/deteriorating housing areas**

Participatory Data

- **Citizen priorities and concerns**
- **Perceived service quality**
- **Community needs**
- **Feedback from vulnerable or underrepresented groups**

What data sources do we have nowadays?

by topics (some examples):

Demography

- Population count
- Age distribution
- Household size
- Vulnerable population
- Homelessness

Housing

- Housing stock
- Rental prices
- Building permits

Services / Facilities

- Public services (education, health, culture...)
- Public transport
- Parks and recreational areas
- Waste collection points

How to produce data?

Surveys

Citizen satisfaction survey

Fieldwork

On-site license inspections

Collaborative tools

Open street maps
Collaborative fieldwork

Citizen provided

Citizen reporting

Admin to admin

EU-level/National statistics
Open data portals
Academic or research projects

Casual data

Mobile phone-based mobility
matrix

How to produce data?

Ready-made

Open and accessible/for a fee

Casual
Admin to admin
Collaborative tools

Custom-made

It requires preparation

Surveys
Fieldwork
Citizen-provided
Collaborative tools

Tools

Web, app, chat, bot...

URBACT

Co-funded by
the European Union
Interreg

Very new things, but very old problems...

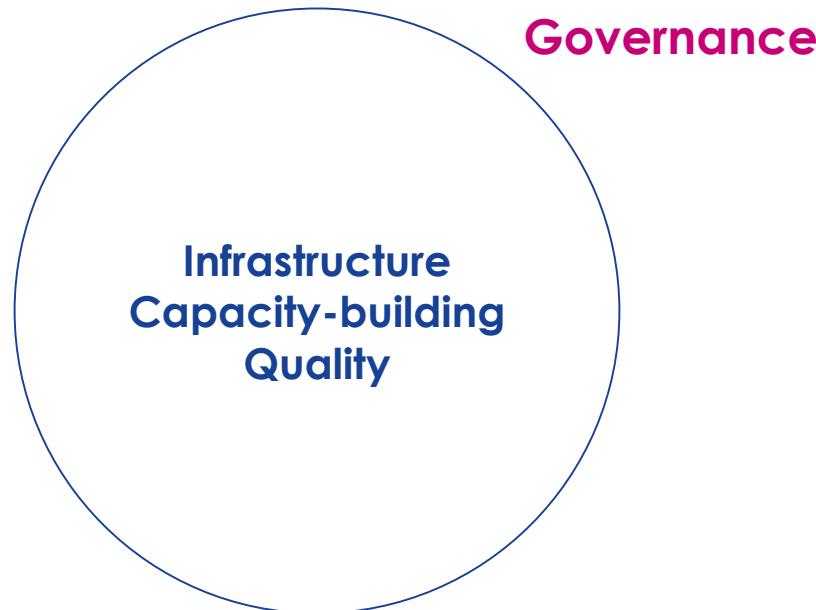

Municipalities used to manage demography and land register/cadastre
but now they face many more data sources

Yet basic challenges remain

we still don't know people or households well enough which is a challenge
to youth policies, students, and systematic resource allocation.

**We have more data than ever
and that means new challenges**

[The challenges

URBACT

Co-funded by
the European Union
Interreg

[The challenge of the data infrastructure

How to manage it? How to store it?

Where are the servers located?
Who supervises them?
Are they encrypted?
Open software or proprietary?
How to integrate different type of data?

URBACT

Co-funded by
the European Union
Interreg

[The challenge of capacity building

Human resources challenge
Training new profiles
(skills in encryption, data analysis and visualisation)

Breaking silos
Knowledge within administration or outside

URBACT

Co-funded by
the European Union
Interreg

The challenge of quality

Data quality

Accuracy, Completeness, Consistency, Clear ownership, Bias

Data continuity

Long term availability, Interoperability, Resilience to system or staff changes

Protecting personal data

Existing policies, Internal processes, Data handling, Roles and responsibilities

[The data analysis and decision-making process

**How to use, analyse, evaluate and
publish the data?**

URBACT

Co-funded by
the European Union
Interreg

What are the uses we make of these data?

Literal

Exact counts

Example:
Number of people

Approximate

Estimates

Example:
Citizen satisfaction or NDVI

Casual data

Indirect or proxy data

Example:
Unemployment inferred from Social Media

How do we analyse/evaluate?

From data to indicator
As a single data or a dataset (mixing)
Assessing what works well and what doesn't
(threshold and ranges)

How to publish the data?

To citizens

Internally

How to publish the data?

To citizens

Output type	Description	Examples
Open Data Portals / Observatories	Public platforms providing downloadable, machine-readable datasets about city life and policies	City open data portals
Visual Storytelling / Infographics	Data translated into accessible charts, maps, dashboards for easy understanding	Interactive dashboards showing social inclusion indicators
Reports & Policy Briefs	Narrative reports summarizing key insights, trends, and policy implications	Annual social monitoring reports, thematic reports
Survey Results & Citizen Feedback	Results from polls, participatory assessments, or satisfaction surveys	Citizen satisfaction surveys, community consultations
Interactive Maps / GIS Applications	Spatial visualization of social, economic, or environmental indicators	Neighborhood-level access to public services or green spaces

Internally

Output Type	Description	Examples
Dashboards & KPI Panels	Centralized visual interfaces summarizing key indicators and trends	Health, mobility, housing dashboards for internal monitoring
Data Catalogue / Repositories Observatories	Structured storage of datasets for analysis and sharing across departments	Urban social data platforms integrating multiple city services
Analytical Reports & Modeling	Internal reports with deep analytics, scenario modeling, predictive insights	Social inclusion trend analysis, impact forecasts
Alerts & Early Warning Systems	Automated notifications based on real-time data	Alerts on overcrowded schools, mobility disruptions, or environmental risks
Collaborative Tools & APIs	Tools enabling different teams to access, integrate, and analyse data	Internal APIs, collaboration platforms between social services and other department

How to apply data in social policies?

And now, some examples

URBACT

Co-funded by
the European Union
Interreg

Which social policies are you implementing in your local contexts?

Inspiration from Bologna (Italy)

- **Medium city, 390.000 inhabitants**
- **Gender/digitisation/sustainability as a transversal**
- **Variety of data sources and collection methodology**

Gender maps of the municipality of Bologna

URBACT

Co-funded by
the European Union
Interreg

From Data Mapping to Gender Data Infrastructure

From Data Mapping to Gender Data Infrastructure

Connection between existing **databases** and indicators (infrastructure, **climate**, vulnerability, etc.) from a gender perspective.

To integrate the gender dimension into **urban policies**, it is essential first to understand the GAPS we need to bridge.

The intersectoral working group: a tool for **engaging internal stakeholders** as a space for developing and further implementing gender data.

Development of an atlas with **Gender Maps** that allows for the territorial reading of data for better **urban planning**.

The atlas with **gender maps** is in the process of implementation and dynamic updating in steps; **a tool to visually guide policies in the proximity of city areas**.

Development of gender indicators to improve the **monitoring of urban projects**.

Other Examples of maps in the atlas

The people

1. Le persone

CR

1.5.1 Indice del carico di cura

Grazie all'indagine sulla qualità della vita realizzata nel 2022²⁷ è stato possibile elaborare un indice che esprime il carico totale dei rispondenti in termini di cura nei confronti di familiari e altre persone a carico. Considerando i rispondenti che hanno responsabilità di cura verso almeno una persona a carico, i valori medi di questo indice nei diversi quartieri mostrano un carico di cura più consistente per le donne che per gli uomini, con alcune differenze territoriali.

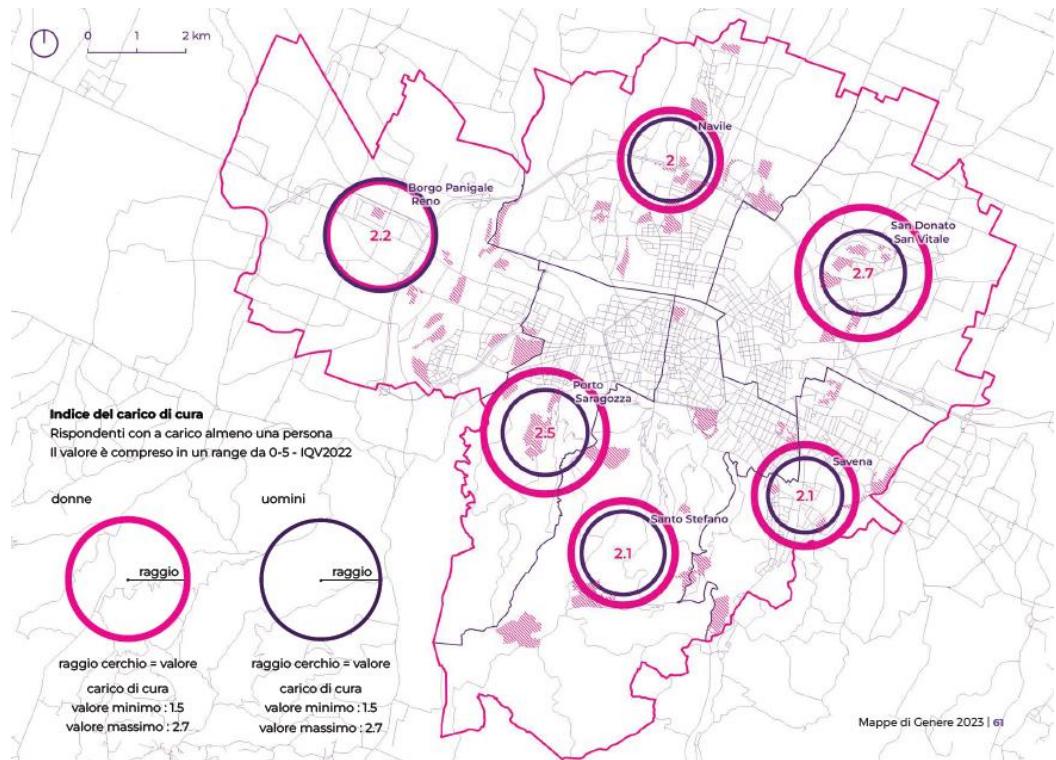

Indice del carico di cura

festa: Indagine Qualità di Vita 2022 - I numeri di Belgrado

<http://inumeridibolognarnemetropolitana.it/analisi-sul-benessere-e-sulla-qualita-della-vita>

[17] <http://inumeridibolognametropolitana.it/analisi-sul-benessere-e-sulla-qualita-della-vita>

Other Examples of maps in the atlas

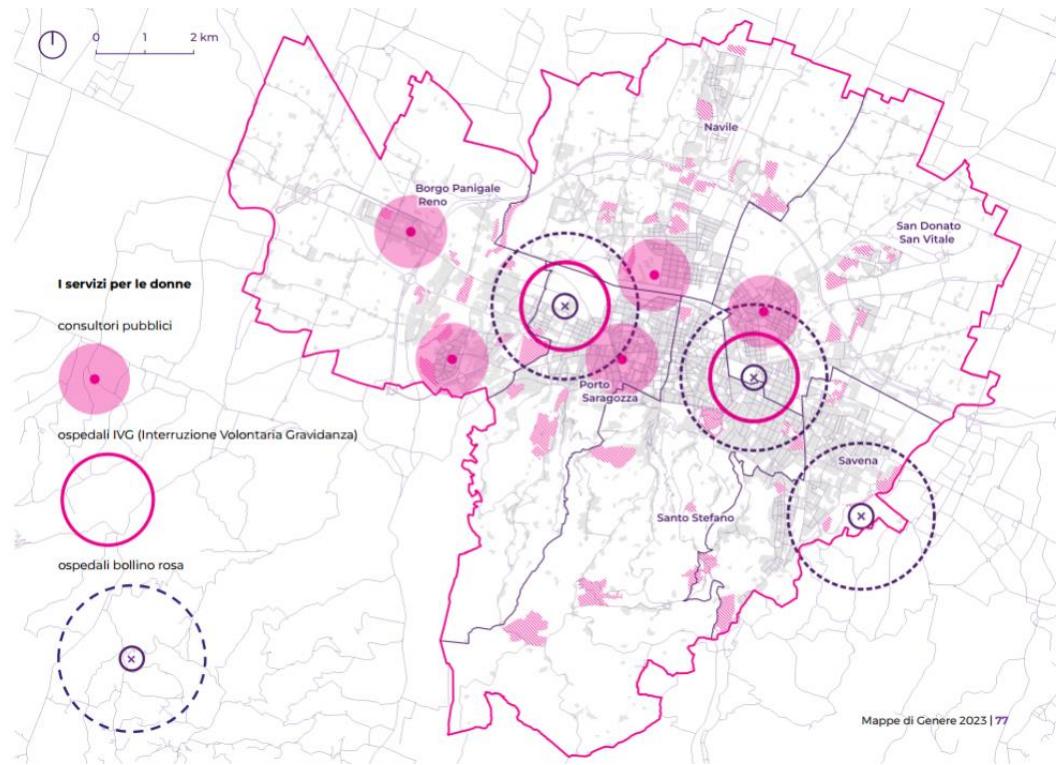

The structure

2. Le strutture
2.1 Strutture per l'assistenza sociale

C R

2.1.2 I servizi per le donne

La seguente mappa mostra i servizi specializzati per le donne, siano essi gli ospedali riconosciuti come Bollino Rosa, gli ospedali IVG (Interruzione Volontaria Gravidanza) ed i consultori, in cui è possibile ottenere la pillola anticoncezionale.

URBACT

Co-funded by
the European Union
Interreg

Other Examples of maps in the atlas

The Open Spaces

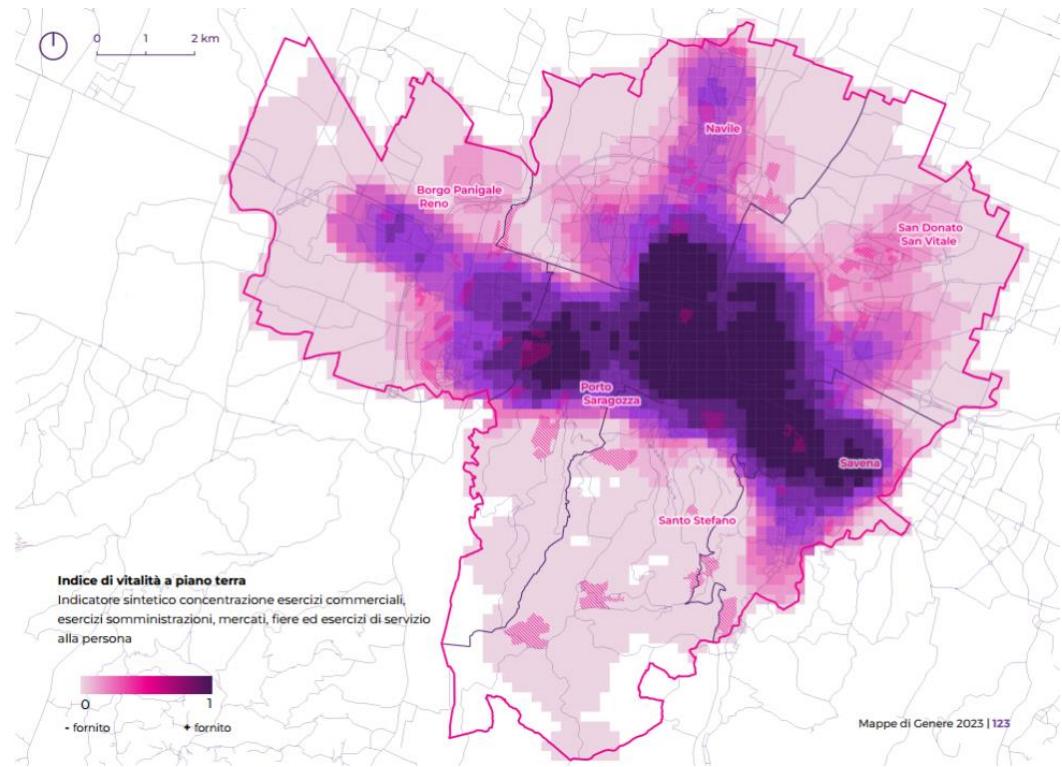

3. Gli spazi aperti
3.1 Spazi aperti ed attrezzati

C R

3.1.5 Indice di vitalità a piano terra

La seguente mappa mostra un indicatore sintetico realizzato a partire dalle informazioni per le diverse attività al piano terra. L'indice mostra la concentrazione di esercizi commerciali, somministrazioni, mercati, fiere ed esercizi di servizio alla persona, misurando (approssimativamente) la vitalità del piano terra, promuovendo la camminabilità ed il controllo sociale dello spazio pubblico, che si traduce in autonomia e sicurezza nell'uso dello spazio pubblico oltre a rendere più facile la gestione della vita quotidiana.

L'indice misura per ogni centro di una griglia di 200 metri il numero di strutture menzionate a una distanza di 400 metri.

Co-funded by
the European Union
Interreg

Other Examples of maps in the atlas

The City in motion

4. La città in movimento

4.2 Mobilità del lavoro, delle cure e dello svago

4.2.4 La mobilità casa-lavoro

Grazie alla piattaforma di Mobility Management System^{zza} del Comune ogni azienda della città può raccolgere direttamente dai suoi lavoratori e dalle lavoratrici informazioni legate alla mobilità che permettono di fare una descrizione molto precisa degli spostamenti relativi all'origine e destinazione degli spostamenti da casa al luogo di lavoro.

In seguito, mostriamo una rappresentazione della matrice di mobilità generata grazie a queste informazioni che nelle mappe successive raggiungeranno un dettaglio maggiore.

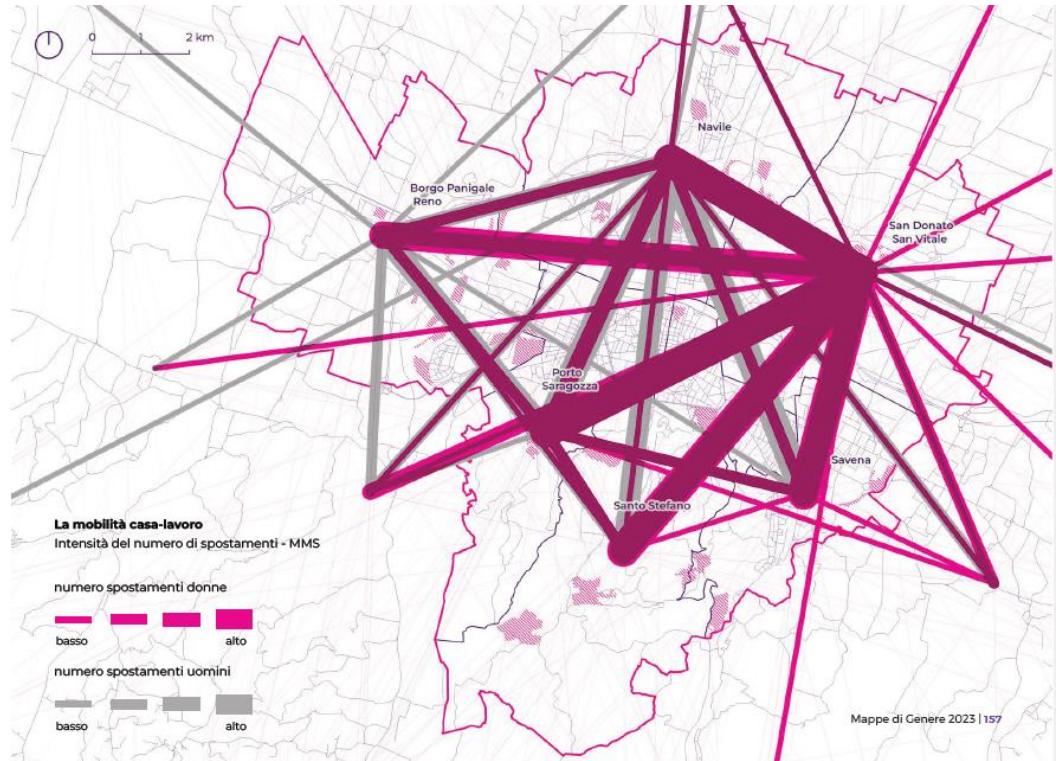

Matrice mobilità casa-lavoro

Other Examples of maps in the atlas

The transformation

5. Le trasformazioni
5.1 Interventi sulle strutture

C R

5.1.4 Gli interventi nei servizi sanitari e sociali

La seguente mappa mostra gli interventi rilevanti realizzati dal Comune per il miglioramento dei servizi sociali e sanitari.

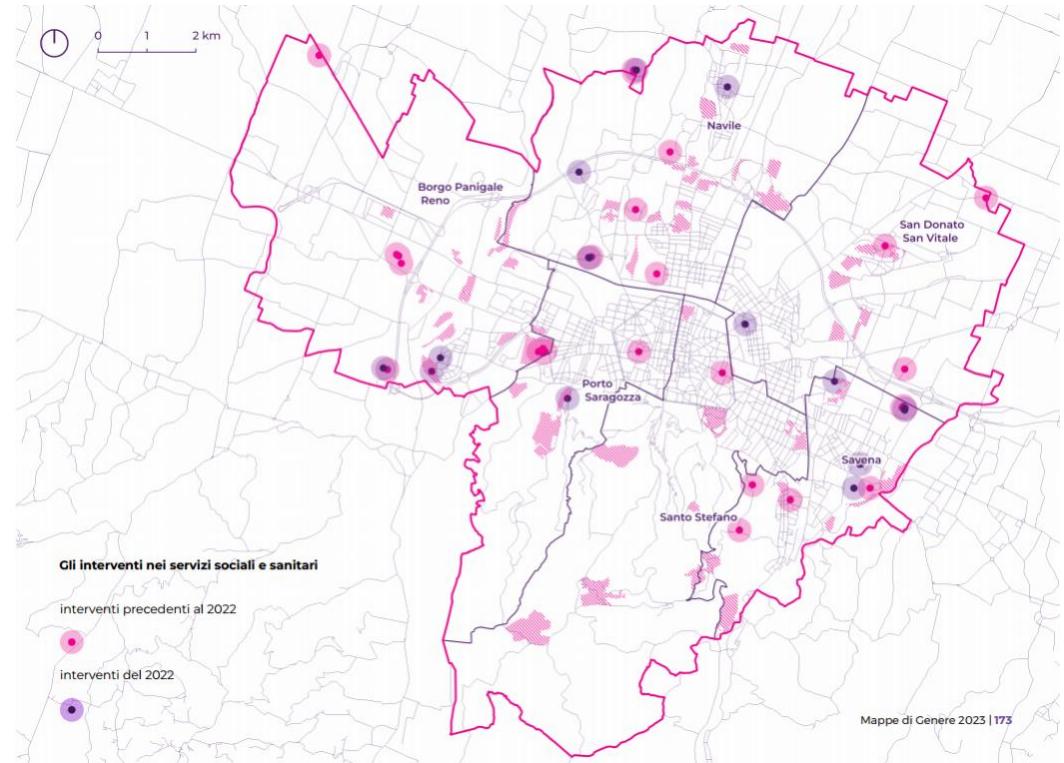

Il database utilizzato "Atlante delle Trasformazioni Territoriali" ha permesso di mostrare i principali interventi inerenti alla categoria dei servizi sociali e sanitari (ovvero le trasformazioni che riguardano il miglioramento, l'ampliamento, la messa in sicurezza e nuove costruzioni di tali strutture e servizi) attuati, promossi, coordinati o autorizzati dall'amministrazione comunale.

I dati vengono raccolti, organizzati e georeferenziati dall'Ufficio di Statistica del Comune di Bologna e aggiornati con cadenza annuale al 31 dicembre. Inoltre le informazioni sono state rappresentate differenziate secondo due fasce temporali di riferimento, considerando gli interventi appartenenti al 2022 e gli interventi precedenti al 2022.

September 25, 2025

Ireland on course for 100% of population to shop online by end of 2025

Ireland is on track to become a fully digital shopping nation by the end of this year, according to new findings published today. Forecasts show that 100% of the population aged 16–74 will be e-shoppers before the close of 2025, marking a historic milestone in consumer behaviour.

The report highlights that 85% of Irish internet users made online purchases in 2024, a sharp increase from 78% in 2023. Growth is being driven by younger generations, rising adoption among older demographics, and greater digital integration by Irish retailers. Total online spend is also forecast to exceed €16.5 billion in 2025, with further growth expected in 2026 as e-commerce cements its role as the default shopping channel for Irish consumers.

Externalities

Positive

Integration

Data enables collaboration across departments and policy areas.

Making social realities visible

Data helps reveal inequalities, needs, and emerging trends

More targeted and territorialised policies

Evidence supports place-based, adaptive, and effective interventions.

Transparency and sovereignty

Shared data strengthens accountability and citizen engagement.

Negative

What isn't measured is invisible

Non-quantifiable aspects may be overlooked.

The citizen becomes virtualized

People risk being reduced to data points, losing context.

Bias and exclusion risks

Data can reproduce or amplify existing inequalities and blind spots.

Privacy and trust concerns

Poor data governance can undermine citizens' trust.
